Fall Protection

When working aloft (6’ or higher), fall protective measures must be implemented!

If you don’t know what personal protective equipment is needed, you’d better ask.

“Can anyone know if a serious or fatal fall will occur in the first few seconds of a worker’s career or 30 years later in the last five seconds? Professionally, our safety approach must assume the first few seconds, and immediately act to control a fall hazard, which is likely to result in serious or fatal injury if the fall occurs.”
